Technical facts

Features

	100kN	150kN
Sizes – leveler height	800 mm	850 mm
Sizes – nominal length	2000, 2450, 3000 mm	2000, 2450, 3000 mm
Sizes – nominal width	3300, 3500, 3600, 3750 mm	3300, 3500, 3600, 3750 mm
Vertical working range - above dock	0 - 410 mm	0 - 390 mm
Vertical working range - below dock	0 - 310 mm	0 - 340 mm
Platform tear plate	8 mm (8/10)	10 mm (10/12)
Surface treatment:	Standard: RAL 5010 or RAL 9005	
Control Unit	Leveler control Door control Shelter control Fault & service indicator	

* Other sizes are available on request

Performance

	100kN	150kN
Load capacity:	10 tonnes	15 tonnes
Max. point load:	6,5 N/mm ²	6,5 N/mm ²
Motor hydraulic unit:	1,5 kW	1,5 kW
Mains supply:	400V 3-phase, 230V 3-phase	
Control unit protection class:	950-series IP54	
Allowable oil types:	ASSA ABLOY standard hydraulic oil (-20°C - +60°C) ASSA ABLOY low temperature hydraulic oil (-30°C - +60°C) ASSA ABLOY bio hydraulic oil (-20°C - +60°C)	
Magnetic valves:	24V/DC 18W S1	
Surface treatment paint class 1:	80 µm C2 M acc. DIN EN ISO 12944-2	
Surface treatment paint class 3:	160 µm C3 M acc. DIN EN ISO 12944-2	
Surface treatment galvanised:	Hot dip 80 µm C4 & C5-I M acc. DIN EN ISO 12944-2

1 Description

1.1 General

1.1.1 Application

The ASSA ABLOY DL6111SA dock leveler is an externally installed and self-supporting dock leveler that is ideal for applications where there are insufficient installation possibilities within the building. The ASSA ABLOY DL6111SA dock leveler system meets the standard demands of most loading operations and fully complies with rules and regulations of the European Standard EN 1398.

1.1.2 Mode of operation

The swing lip safely bridges the gap between the ramp and the lorry bed. When the dock leveler is raised, the lip swings out and the leveler lowers gently onto the lorry bed. After loading or unloading, the leveler is raised again, the lip swings down and the platform returns to its parking position, i.e. to ramp level.

1.1.3 Overview

- 1 Leveler platform
- 2 Swing lip
- 3 + 4 Leveler frame
- 5 Toe guards
- 6 Warning stripes
- 7 Hydraulic unit
- 8 Lift cylinders
- 9 Swing lip cylinder
- 10 Buffers (option)
- 11 Tail lift recess
- 12 Control unit

1.1.4 Standard

Load capacity	100kN
Surface	Painting RAL 5010 or RAL 9005
Hydraulic Equipment	Low noise hydraulic unit Two hydraulic lift cylinders One hydraulic lip cylinder
Lip	Lip length 500 mm Bevelled lip 40 mm Bent lip
Installation angle	90°

1.1.5 Options

Load capacity	150kN
Surface	Painting RAL 3002 or RAL 6005 Hot dip galvanised
Hydraulic equipment	Low temperature oil Bio oil
Lip options	Straight lip Tapered lip $s = 125$ mm
Energy & Ergonomics	Slip protection/noise reduction

1.2 Swing Lip

1.2.1 Lip shapes

1.2.1.1 Standard swing lip

The standard swing lip is a single rectangular lip for use with a fleet of vehicles that is a standard size.

1.2.1.2 Tapered swing lip

A tapered swing lip ensures that the lip reaches the lorry bed, even when the lorry is not parked in the exact centre position. Avoids damage to the truck and interruptions of the dock-in procedure.
 $s = 125$ mm

1.2.2 Lip angles

1.2.2.1 Bent lip

The standard bent steel swing lip ensures smooth transition to a lorry bed both above and below dock level. Avoids tripping hazards according to EN 1398.

1.2.2.2 Straight lip

A straight steel swing lip ensures smooth transition when the lorry bed is below or equal to dock level. Avoids tripping hazards according to EN 1398.

1.3 Platform

1.3.1 Platform tear-plate thickness

The 8 mm 8/10 tear-plate is designed for loading and unloading with typical 4 wheel pneumatic-tire fork-lift trucks and is also suitable for handling equipment with high point loads, such as electric pallet trucks.

1.3.2 Toe guards

The leveler is as standard equipped with toe guards; steel plates between the platform and the frame. The toe guard prevents the pinching of feet when the leveler is lowered.

1.3.3 Slip protection / noise reduction

Applying a polyurethane slip protection coating on the lip and platform ensures a durable non-slip (R11 according to DIN 51130) and noise reduction surface. The effect is a smooth and comfortable surface for handling equipment that is less receptive to wear and tear.

The PU coating material is resistant to impact, to thermal impact and most types of chemicals and it has a high loading capacity.

1.4 Surface

1.4.1 Painting

1.4.1.1 Colors

The dock leveler standard finish is painted. The standard colors are:

Colors available as option are:

1.4.1.2 Standard paint class

If the dock leveler is to be used in a rural area, the standard finish is:

- Paint class 1; 80 µm factory painted for corrosive category C2 M

1.4.1.3 Paint classes

If the dock leveler is to be used in an urban or industrial atmosphere, or in a coastal area, it may be appropriate to select an alternative paint class with increased resistance to corrosion C3 M.

- Paint class 3; 160 µm factory painted for corrosive category C3 M

1.4.2 Hot galvanising

To increase corrosion protection to C4 for saline coastal areas or C5-I for aggressive or humid atmospheres, the dock leveler can be delivered with hot dip galvanised (80 µm) steel parts.

1.5 Docking control systems

1.5.1 950 Docking LA SD

- Hold-to-run button to position the lip on the truck bed.
- Impulse auto button to put the leveler back in parking position.
- Mains isolator or emergency stop button.
- Interface to incorporate ASSA ABLOY wheel chock.

1.5.2 950 Docking DLA SD

Designed to operate an overhead sectional door and an inflatable shelter in the docking station.

- Hold-to-run button to position the lip on the truck bed.
- Impulse auto button to put the leveler back in parking position.
- Mains isolator or emergency stop button.
- Interface to incorporate ASSA ABLOY wheel chock.

1.5.3 950 Docking LSA SD

Designed to operate an overhead sectional door and an inflatable shelter in the docking station.

- Hold-to-run button to position the lip on the truck bed.
- Impulse auto button to put the leveler back in parking position.
- Mains isolator or emergency stop button.
- Interface to incorporate ASSA ABLOY wheel chock.
- Designed to operate an inflatable shelter in the docking station.

1.5.4 950 Docking DLSA SD

Designed to operate an overhead sectional door and an inflatable shelter in the docking station.

- Hold-to-run button to position the lip on the truck bed.
- Impulse auto button to put the leveler back in parking position.
- Mains isolator or emergency stop button.
- Interface to incorporate ASSA ABLOY wheel chock.
- Designed to operate an overhead sectional door and an inflatable shelter in the docking station.

1.5.5 950 Docking power cable

- Standard: 1,1 m power cable to connect to mains switch on the wall.
- Option: 1,5 m power cable with CEE-plug, pre-mounted.

1.6 Equipment

1.6.1 Buffers

Buffers placed in front of the dock leveler absorb the energy of a vehicle that accidentally or intentionally hits the building. Buffers are available in various sizes, in fixed or moving models, and with rubber finishing or steel plate and spring function.

1.6.1.1 RS

Application

The RS buffer is the economical solution for docking stations where vehicles of equal sizes load and unload.

1.6.1.2 RB

Application

The RB buffer is a large fixed rubber. It is the universal building and vehicle protection solution.

Available depths:

- 90 mm
- 140 mm

1.6.1.3 RB with steel front plate

Application

The RB buffer with steel protection front plate increases the building protection and the buffer service life.

Available depths:

- 90 mm
- 140 mm

1.6.1.4 RB with steel front and top plate

Application

The RB buffer with steel protection front and top plate is designed for vehicles with high lorry beds like interchangeable open bodies and containers.

Available depths:

- 90 mm
- 140 mm

1.6.1.5 Roller buffer

Application

The Roller buffer is a robust solution for docking stations where vehicles make notable vertical movements when loading or unloading. The Roller buffer is designed for vehicles without protruding elements below the rear door.

1.6.1.6 EBF

Application

The EBF buffer is the ideal solution for docking stations where vehicles are expected to make notable vertical suspension changes when loading or unloading.

This buffer follows vertical movements of the vehicle.

Available depths:

- 90 mm
- 140 mm

1.6.2 ASSA ABLOY DE6190WC Wheel chock

The wheel chock has a sensor to detect the presence and position of the vehicle and is connected to the dock leveler control panel. If no vehicle is detected, the docking station is blocked for safety reasons. Furthermore, the wheel chock prevents the vehicle from moving during loading/unloading.

1.6.3 ASSA ABLOY DE6090TLS Traffic light system

The traffic light system either has a sensor above the dock leveler that measures the presence of the vehicle or it is a wheel chock that detects the vehicle.

If there is no vehicle (dock leveler is free), the traffic light inside is red, outside is green. The traffic light can also be combined with a wheel chock or door/leveler interlocking.

1.6.4 ASSA ABLOY DE6090DL Dock light Heavy Duty LED

Where dock lights are often a vulnerable object in the docking area, the virtually indestructible Dock Light Heavy Duty LED is the perfect solution to bring light in the truck and docking area. It is designed for the most demanding environments and can withstand possible hard hits from a moving forklift without being damaged.

1.6.5 ASSA ABLOY DE6190FL Fan light

The compact fan light is a combined solution of a fan and a dock light in one system. The fan creates a continuous stream of fresh air that refreshes and cleans the air inside the trailer or container and the integrated dock light provides extensive light. It has a flexible solid arm that fits general industry and logistics applications, for an easy and fast docking process.

1.6.6 Parking guides

This visual aid makes it easier to park the vehicle and reduces the risk of collision. Especially advantageous for docking stations with wide leveler lips and cushion shelters. Parking guides can be bolted or cast in concrete on the floor before the leveler.

1.6.7 ASSA ABLOY DE6190DI Dock-IN Autodock

ASSA ABLOY Dock-IN offers a complete line of guide- and traffic lights that align the truck with the docking bay to make the dock-in procedure easy and safe. ASSA ABLOY Dock-IN is based on modern LED technology and stands for high reliability and low energy consumption.

1.6.7.1 Dock-IN White

ASSA ABLOY Dock-IN White consists of two white LED light bars. It is designed to help guide a truck to the dock. ASSA ABLOY Dock-IN White offers much more visual aid than white stripes on the shelter or asphalt. Mounted on the wall they are always clearly visible, less exposed to wear and tear and not hidden by dirt and snow!

1.6.7.2 Dock-IN Red

ASSA ABLOY Dock-IN Red is a traffic light system consisting of one red LED light bar, a sensor for truck detection and a traffic light control box. The sensor detects the truck when it is in the right position, very close to the dock. The red LED turns ON to give the signal to the truck driver to break and let the truck roll against the buffer at the lowest speed, without the risk of damage. The system includes interlocking of the loading bay control box functions which are only released when the truck is in place and the red LED is ON.

1.6.7.3 Dock-IN White & Red

ASSA ABLOY Dock-IN White & Red is the optimum combination of both systems for easy and safe docking. The white LEDs provide the visual target and the red LED positions the truck at the right distance to the dock. The white guiding LEDs turn off when the truck is detected and at the same time the red LED turns ON. Before the truck is leaving, the operator push the RESET button on the control box inside the building. Then the white LEDs turn ON and the red LED turns off as a signal to the truck driver that the loading is finished.

1.6.7.4 Standard

1. Indication light inside and RESET button

Indication Light Inside.
 A Green LED light on the 950 control box to indicate that the control box functions are released. The operator of the loading bay equipment knows exactly when he can start loading or unloading. The green LED light will help to save energy and to control the complete loading process.

RESET button

The RESET function is activated from a push button on the control box inside the building before the truck is leaving. The white LEDs turn ON and the red LED turns OFF as a signal to the truck driver that loading is finished. For this function, the leveler must be in parking position, the sectional door closed and the inflatable shelter retracted.

For the activation of the RESET function, you push the button for 1 second. If you push the button for 3 seconds before the truck drives off, then the red LED turns ON again the white LEDs turn OFF. When the truck is leaving, the white LEDs turn ON and the Dock-IN system is ready for the next truck.

1.6.7.5 Available Options

- **Dock-IN Green and Red.**
 Green LEDs instead of White. This version has the same function as Dock-IN White and Red.
- **Indication Light Inside, built into the 950 control box**
 A Green LED light on the control box to indicate that the control box functions are released. The operator of the loading bay equipment knows exactly when he can start loading or unloading. The green LED light will help to save energy and to control the complete loading process.
- **Second Red LED**
 A second Red LED bar can be added to have the red LED traffic light on both sides of the docking bay. This is an option for terminals with left and right hand drive international trucks.
- **Wheel chock connection**
 To increase the safety it is possible to connect the ASSA ABLOY wheel chock to the traffic light function ASSA ABLOY Dock-IN Red or ASSA ABLOY Dock-IN White and Red. The control box will be interlocked until the truck is detected and the wheel chock is in place.

Note:

Make sure the LED bars will not be covered by the Dock shelter.

Lowest possible truck is max. 2000 mm below the sensor position.

2 Selection guide

2.1 Load capacity according to EN 1398

The EN 1398 describes 3 key definitions about loads.

2.1.1 Rated load

The rated load is the total weight of the goods, the forklift truck and the driver.

2.1.2 Axle load

Axle loads shall be taken acting over two rectangular contact areas at 1 m lateral distance. These areas shall only apply if the actual conditions do not call for more severe loading. The size of the footprint [mm²] is derived from the wheel load [N] divided by 2 [N/mm²]. The ratio of the rectangular print is $W:L = 3:2$.

In the drawing measures for a leveler with a load capacity of 100kN or 150kN are shown.

2.1.3 Dynamic load

The dynamic load is the movement of the rated load and is the pressure on the leveler platform caused by the moving forklift truck.

2.2 Select the load capacity

The load capacity of a dock leveler must always be higher than the rated load.

2.2.1 Example

	100kN	150kN
Weight of forklift truck	5000 kg	8000 kg
Weight of goods	3500 kg	6500 kg
Weight of driver	100 kg	100 kg
Total weight/rated load	8600 kg	14600 kg
Suitable load capacity of the leveler	10000 kg/ 100kN	15000 kg/ 150kN

2.3 Select the leveler length

When determining the leveler length, measure the maximum height difference between the truck bed and the dock level. Next, determine which vehicles will be used and lookup the maximum gradient the vehicles are allowed to be used on.

Vehicle	Max gradient
Roll cage	3%
Hand pallet truck	3%
Electric pallet truck	7%
Forklift truck (battery)	10%
Forklift truck (gas / petrol)	15%

2.3.1 The calculation

Minimal leveler length = height difference / gradient (%)

2.3.2 Example

Vehicle:	Electric pallet truck (max 7% gradient)
Truck height:	1325 – 1000 mm
Dock height:	1150 mm

The difference between Truck height and Dock height = 175 mm

175 mm / 7% = 2500 mm leveler length

2.4 Nominal width

The ASSA ABLOY DL6111SA dock leveler is available with a nominal width of 2000 mm or 2200 mm. The correct nominal width must exceed the widest loading vehicle by at least 700 mm.

2.5 Free space under lip

2.5.1 Steel lip

3 Specifications

4 CEN Performance

4.1 Safety according to the European Standard EN 1398

- Emergency Stop Function.
 - Safety valves block lowering movement after max. 6% of the nominal length of the leveler.
 - Two lift cylinders make sure the leveler stops in a horizontal position.
- Free floating position.
- Platform torsion. Lateral deflection of at least 3% of nominal width.
- Toe guards cover gap between platform and pit in leveler's highest position.
- Working range gradient max. 12,5% ($\sim 7^\circ$).
- Warning stripes on side plates and on frame (black/yellow).

5 Building and space requirements

5.1 Electrical preparations

1	Mains supply: Mains fuse: Motor power:	3/N/PE AC 50 Hz 400V 3-phase, 230V 3- phaseV D0 10 A gL 1,5kW
2	Conduit for wiring internal diameter 70, angles <45° (by others)	
3	Mains isolator*:	Only for control box with emergency stop
4	Optional safety switch on sectional door to disable lev- eler when door is closed*	

* non-standard

5.2 Ways of installation

5.2.1 Steel plinths

5.3 Additional equipment of installation

5.3.1 Support brackets

The optional brackets have to be used if it is not possible to weld the autodock side units on the whole width on the dock edge. The brackets support only the autodock side units. Chemical anchors M16 are delivered together with the brackets.

5.3.2 Eye bolt

The optional eye bolts are used to secure a demountable container or any other truck at the autodock with the aid of a tension strap.

6 Service tailored to your needs

Designing and fitting your dock leveler is just the beginning. The most meaningful relationships are the ones built to last. We stay by your side long after installation, with service agreements specifically designed to ensure your ASSA ABLOY DL6111SA delivers the expected performance you deserve.

To choose the best service agreement for you, we first determine what your priorities are for your dock leveler. Just preventive maintenance, or the opportunity to fully optimize its performance? Together, we can tailor your own service agreement to suit you.

Whatever agreement you choose, one thing is certain – you will always be in good hands and completely taken care of, anytime, anywhere.

With ASSA ABLOY Maintain you can focus on your core business. We provide preventive maintenance and safety check ups so that your entrance solution always lives up to the latest safety requirements, local regulations and operational guidelines.

You can also choose to have access to our digital connected solutions, which allow you to proactively monitor and control the dock leveler and its maintenance requirements.

You can see the status, health and service needs of your ASSA ABLOY DL6111SA- all in real-time. You can also remotely monitor its performance and get personalized notifications of errors and alerts.

With ASSA ABLOY Optimize, we take full care and responsibility of the equipment, so you will never have to worry about your dock leveler.

In addition to the preventive maintenance and safety check-ups offered by ASSA ABLOY Maintain, we also cover all repairs and parts*, ensuring stable maintenance costs and simplified admin.

It also includes digital solutions that allow us to safely and securely monitor your dock leveler and act on the real-time data with planned maintenance or repairs before they become disruptive emergency repairs.

This data also enable us to pinpoint any errors and contact you for remote troubleshooting. If we can avoid sending out a technician, it is cost and time efficient for both parties, and it also helps reduce our carbon footprint.

In cases where we cannot remote troubleshoot, we ensure fast response, sending one of our experienced technicians with the right tools, resources and parts to fix the specific problem - potentially first time.

**excluding cases of misuse or collision*

For all your service needs, use our dedicated 24/7 service hotline. From there we can tailor your own service agreement together.
